andylabs.site | Jakarta Barat

Computer Science student focused on **Full-Stack Development** with hands-on internship experience building web applications across **frontend, backend, APIs, and databases**. Strong foundation in software development with experience across multiple languages and frameworks Comfortable translating requirements into **functional, maintainable, and user-focused solutions**. plus additional exposure to **AI, machine learning, deep learning, NLP, SR, and LLM integration**.

EDUCATION

Binus University - *Alam Sutera* *July 2023 - Febuary 2027 (Expected)*
*Bachelor's Degree in **Informatics Engineering** — System Intelligence*
GPA: ***3.77/4.00***

- **Thesis:** *Multi-Agent System with Hybrid Approach (NLU, Logic Techniques, and LLM) for Social Engineering Simulation in "Silent Terror" Strategy Game*
- **Relevant Coursework:** Software Engineering, Object-Oriented Programming, Data Structure, and Algorithm Programming, Deep Learning, Machine Learning, Natural Language Processing.

SMAS Pelita Utama (Science)- *Batam* *July 2020 - April 2023*

- **Activities:** Led as the president of the Student Representative Council (MPK), and led major events as project director in the school's main event.

PROFESIONAL EXPERIENCE

Qreed AI – *Freelance* *September 2026 - Present*
Fullstack Developer & AI Researcher
Develop and maintain QREED AI's products end to end, from the AI content platform and internal tools to AI dubbing and automated software delivery, turning client requirements into production-ready features and improvements. *Projects:*

QREED AI - *Main Web*

- Built **QREED AI**, a node-based canvas where creators chain AI models to generate images and videos. It runs as a monorepo of **four Next.js apps** (product, marketing, etc) on React Flow, PostgreSQL and an Express API, with Docker-based deploys.
- Shipped **31 pages and 170+ API endpoints**, fixed bugs on **38 pages** and resolved **37 production errors**, for registered users including subscribers and admin.

QREED Dubbing - *Research Speech Recognition and Computer Vision*

- Built a local AI tool that dubs Chinese dramas into Indonesian or English in each actor's own voice, using **Whisper (STT), RapidOCR, LLM translation and voice-cloning TTS** (Chatterbox, OmniVoice).
- Runs speech recognition and voice cloning entirely on a **6 GB laptop GPU**, with no paid cloud voice service, while cutting transcript errors from **13% to 2.4%** .

QREED Factory - *Research Coding Agent in Software Factory*

- Operated an **AI pipeline** where agents plan, write and review code, with automated checks and human-approved deploys (TypeScript, Fastify, PostgreSQL, Docker).
- Delivered **a pilot café ordering app** (QR ordering, payment, owner dashboard) and caught a **credential race condition** and a **quota bypass** before deploy.

POLYTRON – *Internship* *February 2026 – January 2027*
Application Developer
Build and maintain four internal web apps for Polytron's employees, HR team and service centers, from interface and API to database, with Docker deploys and AI features in two of them *Project:*

ESS (*Employee self-service*)

- Turned an early build into a progressive web app (Node.js, Redis, Firebase, Docker) for letter requests, room bookings, attendance and push notifications, plus an admin panel for onboarding, offboarding and asset handovers.
- Became the main entry point to **7+ internal applications**, used by every Polytron employee.

SCM (*Supply chain AI assistant*)

- Researched and built an LLM assistant (Python FastAPI, React, local LLM with RAG) that reads inventory and bill-of-materials files, answers stock questions and suggests production combinations from materials on hand.
- The research became the **benchmark for adopting AI** at Polytron.

QMS (*Queue management system for service centers*)

- Adapted the queue app for Smart TVs with a large-screen UI and voice calling (text-to-speech), packaged as an Android WebView app.
- runs at **every Polytron service center**, showing customers their queue status on site.

ATS (*AI-assisted CV screening*)

- Built a CV screener that parses PDF/Word CVs and scores candidates against HR criteria using NLP (NER, S-BERT) and a local LLM (DeepSeek-R1 14B), with a Node.js admin panel, all in Docker.
- Gives HR a **first read on every new job application** before they review it manually.

SELECTED PROJECT - More at *andylabs.site*

Silent Terror - *Thesis Project* *Angular | Python | SQL | Docker | SVM | Fuzzy Logic | LLM*
https://github.com/Andysaputra1/GamesSilentTerror
Engineered a hybrid AI architecture for a "silent terror" environment by integrating **ML/DL models (SVM, Naive Bayes, Transformer LLMs) and decision frameworks (Fuzzy Logic, Utility AI, Behavior Trees)**, significantly amplifying psychological suspense and **delivering an immersive player experience.**

My Invitation — *Personal Project* **Node.js**
https://www.myinvitation.cards
Developed a **digital wedding-invitation platform** with themed collections, package previews, and consultation flows focused on responsive and elegant presentation. The platform provides users with a centralized way to explore invitation options and initiate event consultations.

ORGANIZATION EXPERIENCE

Freshmen Leader – *Alam Sutera* August 2025 – September 2025
Guided first-year students in adapting to university life, **mentoring** them through Binusian values, academic transition, and campus engagement to build confidence, connection, and motivation.

BINUS TV Club - *Alam Sutera* August 2023 - December 2025
Former core member and Technical Advisor, providing technical direction, cross-functional coordination, and end-to-end post-production support for large-scale student initiatives.

Technical Advisor - Core Development *(Media Journey, Glimpse of BINUSTV Club, Buram EXPO, LDKA)*

- Mentored new members in technical best practices and supported project execution through hands-on guidance and feedback to ensure quality results.

Technical Coordinator (*Buram* Expo)

- Managed technical setup and on-site issue resolution across divisions ensure optimal performance and event operations.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, Java, C
Frontend & Backend: HTML, CSS, React.js, Angular, Node.js, Express.js, FastAPI, Flask
Database, APIs & Tools: MySQL, SQL, RESTful APIs, Docker, Git
Artificial Intelligence: Machine Learning, Deep Learning, SR, NLP, LLM Integration, OpenAI API, Prompt Engineering

ADITIONAL INFORMATION

Soft Skills: Strong **leadership, teamwork, and communication** skills, with an adaptable and solution-oriented approach to problem-solving and time management.
Achievement: 2nd Place — SIM Business Plan Competition, Batam (2022)
Languages: Indonesian, English, Mandarin (Basic), Teochew
